

# Ring of Fire

## True

The Ring of Fire is a large area where many earthquakes and volcanic eruptions occur.

Volcanic eruptions or earthquakes can happen when tectonic plates push into each other, pull apart or slide against each other.

The Ring of Fire sits on top of several tectonic plates.

There are more than 450 volcanoes along the Ring of Fire.

## False

The Ring of Fire is found along the edge of Europe.

Tectonic plates move very quickly.

The countries along the Ring of Fire are at a lesser risk of volcanic eruptions and earthquakes than anywhere else in the world.

All of Earth's volcanoes are found along the Ring of Fire.
